App Store Submission — Step-by-Step Guide

App: Atelier by Cognirise **Prepared:** July 23, 2026 **Companion document:** *Apple App Store Submission — Prepared Answers* (contains every ready-to-paste answer referenced below)

You have already logged in to your Apple Developer account. Follow the steps below in order.

Part 1 — In the Apple Developer portal (developer.apple.com)

1. Register the bundle ID. Go to **Certificates, Identifiers & Profiles → Identifiers → +**, choose **App IDs → App**, and register:

- Bundle ID: `com.cognirise.atelier`
- Description: `Atelier by Cognirise`

Leave capabilities at their defaults — push notifications are not needed (the app uses local reminders only).

Part 2 — In App Store Connect (appstoreconnect.apple.com)

2. Create the app record. Go to **My Apps → + → New App**:

- Platform: iOS
- Name: `Atelier by Cognirise`
- Primary language: your choice (English U.S. or U.K.)
- Bundle ID: select `com.cognirise.atelier`
- SKU: `atelier-mobile-001`

3. Fill in App Information. Use Section 1 of the prepared-answers document: subtitle, category (Business, secondary Productivity), content rights answer, and the copyright line.

4. Complete the Age Rating questionnaire. Section 2 of the prepared-answers document — answer **None / No** to everything; the rating lands at **4+**.

5. Fill in App Privacy. Sections 3–4 of the prepared-answers document have every data-collection answer. Also paste the Privacy Policy URL — this must be your **published** Atelier web app's `/privacypolicy` page, so make sure the web app is published first and use that live domain.

6. Complete the DSA trader declaration (under Business / Agreements). This needs the one item still open on your checklist: a legal business address, phone number, and email. Apple publishes these on your EU App Store page.

7. Set up the version page. Paste from the prepared-answers document:

- Promotional text
- Description
- Keywords
- Support URL: `https://<your-published-domain>/support`
- Marketing URL: `https://cognirise.ai`

8. App Review information. Enter the demo account (`demo@cognirise.ai` and its password from the prepared-answers document), your contact details (Mounir Ariss, mounir@cognirise.ai, +971 50 650 4416), and the review notes from Section 8.

Part 3 — Back in Replit: build and upload the bundle

9. Publish the mobile app. Select **Atelier Mobile** in the preview pane and start the **Publish → App Store** flow. Sign in with the same Apple account when prompted. Replit/Expo builds the signed iOS bundle in the cloud and uploads it to App Store Connect

automatically. This can take a while — often 20–60 minutes including Apple's processing.

Part 4 — Final assembly and submission

10. Screenshots. While the build processes, prepare 6.9" iPhone screenshots (the one asset still on the to-do list).

11. Attach the build. Once the build appears in App Store Connect (you'll get an email when processing finishes), select it on the version page.

12. Submit for review. Click **Add for Review → Submit**. Apple's review typically takes 1–3 days. Reviewers will log in with the demo account, so make sure the published backend is up.

Common blockers — check before submitting

1. The privacy policy and support URLs must be **live** on the published web app.
2. The demo account must work against the **production** deployment.
